

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (currently amended) A system for ordering search results, comprising:  
a country selector dynamically determining at least one preferred country applicable to search results generated responsive to a search query executed on potentially retrievable information and provided in a plurality of search result countries; and  
a search result orderer ordering at least some of the search results ~~in consideration of~~ based on the at least one preferred country.
2. (original) A system according to Claim 1, further comprising:  
an interface characterizer determining the at least one preferred country using interface characteristics.
3. (original) A system according to Claim 2, wherein the interface characteristics comprise at least one country accepted by the user interface.
4. (original) A system according to Claim 1, further comprising:  
an IP characterizer determining the at least one preferred country using IP characteristics.
5. (currently amended) A system according to Claim 4, wherein the ~~interface~~ IP

characteristics comprise a network address of a client application from which the search query was submitted.

6. (currently amended) A system according to Claim 1, further comprising:  
an indexer ranking the search results; and  
the search result orderer ordering at least some of the ranked search results relative to the at least one preferred country.

7. (currently amended) A system according to Claim 6, further comprising at least one of:

the search result orderer demoting each ~~such~~ search result in a country other than the at least one preferred country and promoting each ~~such~~ search result in the at least one preferred country by at least one position; and

the search result orderer promoting each ~~such~~ search result in a country other than the at least one preferred country and demoting each ~~such~~ search result in the at least one preferred country by at least one position.

8. (currently amended) A system according to Claim 1, further comprising:  
a scorer assigning a numerical score to the search results; and  
[[a]] the search result orderer adjusting the numerical score of at least some of the search results in the at least one preferred country.

9. (original) A system according to Claim 8, further comprising at least one of:

the search result orderer increasing the numerical score assigned to the search results in the at least one preferred country and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country; and

the search result orderer decreasing the numerical score assigned to the search results in the at least one preferred country and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country.

10. (original) A system according to Claim 8, further comprising:

a country selector including one or more related, alternate and less preferred countries in the at least one preferred country; and

the search result orderer adjusting the numerical score, comprising at least one of increasing the numerical score assigned to the search results in the one or more related, alternate and less preferred countries and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country, and decreasing the numerical score assigned to the search results in the one or more related, alternate and less preferred countries and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country.

11. (currently amended) A system according to Claim 1, further comprising:

the search result orderer sorting ~~the~~ at least some of the search results with adjusted numerical scores.

12. (currently amended) A method for ordering search results, comprising:  
dynamically determining at least one preferred country applicable to search results generated responsive to a search query executed on potentially retrievable information and provided in a plurality of search result countries; and  
ordering at least some of the search results ~~in consideration of~~ based on the at least one preferred country.
13. (original) A method according to Claim 12, further comprising:  
determining the at least one preferred country using interface characteristics.
14. (original) A method according to Claim 13, wherein the interface characteristics comprise at least one country accepted by the user interface.
15. (original) A method according to Claim 12, further comprising:  
determining the at least one preferred country using IP characteristics.
16. (currently amended) A method according to Claim 15, wherein the ~~interface~~ IP characteristics comprise a network address of a client application from which the search query was submitted.
17. (currently amended) A method according to Claim 12, further comprising:

ranking the search results; and  
ordering at least some of the ranked search results relative to the at least one preferred country.

18. (currently amended) A method according to Claim 17, further comprising at least one of:

demoting each ~~such~~ search result in a country other than the at least one preferred country and promoting each ~~such~~ search result in the at least one preferred country by at least one position; and

promoting each ~~such~~ search result in a country other than the at least one preferred country and demoting each ~~such~~ search result in the at least one preferred country by at least one position.

19. (original) A method according to Claim 12, further comprising:  
assigning a numerical score to the search results; and  
adjusting the numerical score of at least some of the search results in the at least one preferred country.

20. (original) A method according to Claim 19, further comprising at least one of:  
increasing the numerical score assigned to the search results in the at least one preferred country and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country; and

decreasing the numerical score assigned to the search results in the at least one preferred country and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country.

21. (original) A method according to Claim 19, further comprising:  
including one or more related, alternate and less preferred countries in the at least one preferred country; and

adjusting the numerical score, comprising at least one of:

increasing the numerical score assigned to the search results in the one or more related, alternate and less preferred countries and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country;  
and

decreasing the numerical score assigned to the search results in the one or more related, alternate and less preferred countries and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country.

22. (currently amended) A method according to Claim 12, further comprising:  
sorting ~~the~~ at least some of the search results with adjusted numerical scores.

23. (original) A computer-readable storage medium holding code for performing the method according to Claim 12.

24. (currently amended) An apparatus for ordering search results, comprising:  
means for dynamically determining at least one preferred country applicable to search results generated responsive to a search query executed on potentially retrievable information and provided in a plurality of search result countries; and  
means for ordering at least some of the search results ~~in consideration of~~ based on the at least one preferred country.

25. (currently amended) A system for providing preferred country ordering of search results, comprising:  
a parser receiving a search query describing potentially retrievable information provided in a plurality of search result countries;  
an indexer executing a search by evaluating the search query against information characteristics maintained in a searchable data repository; and  
a country promoter dynamically determining at least one preferred country applicable to search results generated responsive to the executed search, and ordering at least some of the search results ~~in consideration of~~ based on the at least one preferred country.

26. (original) A system according to Claim 25, further comprising:  
a user interface characterizer determining a country accepted by a user interface; and  
a country selector selecting the country as the at least one preferred country.

27. (original) A system according to Claim 25, further comprising:

an Internet Protocol (IP) characterizer determining a country based on a network address of a client application from which the search query was submitted; and  
a country selector selecting the country as the at least one preferred country.

28. (currently amended) A system according to Claim 25, further comprising:  
a search result orderer ordering the search results based on a match of a country of ~~such~~  
the search results to the at least one preferred country.

29. (currently amended) A system according to Claim 25, further comprising:  
a search result orderer ordering the search results by degree of match of a country of ~~such~~  
the search results to the at least one preferred country.

30. (original) A system according to Claim 29, further comprising:  
the search result orderer demoting the search results in a country other than the at least  
one preferred country by a predefined shifting factor.

31. (original) A system according to Claim 30, wherein the predefined factor  
substantially equals two (2.0).

32. (original) A system according to Claim 29, further comprising:  
the search result orderer promoting the search results in a country other than the at least  
one preferred country by a predefined shifting factor.

33. (original) A system according to Claim 25, further comprising:  
a scorer ordering each of the search results by degree of match to the information characteristics.
34. (original) A system according to Claim 25, further comprising:  
a country detector detecting a country associated with at least one search result.
35. (original) A system according to Claim 34, further comprising at least one of:  
Uniform Resource Locator (URL) analyzer determining a URL extension for the at least one search result;  
a domain registrar examiner examining a domain registrar address for the at least one search result and inferring the country from a business associated therewith;  
a country inferrer inferring the country from at least one of the IP address of a Web server from which the search result was obtained, a search result document for the at least one search result, or other Web pages on a same Web site as the at least one search result; and  
a hyperlink analyzer examining anchor text of hyperlinks to the search result document, text near the hyperlinks, or countries of the Web pages with hyperlinks to the search result document.
36. (original) A system according to Claim 25, wherein the search results are assigned a numerical score, further comprising:

a search result orderer increasing the numerical score assigned to at least some of the search results in the at least one preferred country.

37. (currently amended) A system according to Claim 36, wherein the numerical score is adjusted in accordance with the formula:

$$s_i = \frac{s_i + 1}{2}$$

where  $s_i$  comprises the numerical score for each such search result  $i$ .

38. (original) A system according to Claim 36, wherein the search results are assigned a numerical score, further comprising:

a search result orderer decreasing the numerical score assigned to at least some of the search results in the at least one preferred country.

39. (original) A system according to Claim 25, further comprising:  
a presenter presenting the search results.

40. (original) A system according to Claim 39, further comprising:  
the presenter performing at least one of controlling enablement of presentation of at least some of the search results for each of the at least one preferred country, grouping together at least some of the search results for each of the at least one preferred country and arranging at least some of the search results for each of the at least one preferred country next to at least some of the search results for at least one country other than the at least one preferred countries prior

to presentation to the user.

41. (original) A system according to Claim 25, further comprising:

a country selector including one or more related, alternate and less preferred countries in the at least one preferred country.

42. (currently amended) A method for providing preferred country ordering of search results, comprising:

receiving a search query describing potentially retrievable information provided in a plurality of search result countries;

executing a search by evaluating the search query against information characteristics maintained in a searchable data repository;

dynamically determining at least one preferred country applicable to search results generated responsive to the executed search; and

ordering at least some of the search results ~~in consideration of~~ based on the at least one preferred country.

43. (original) A method according to Claim 42, further comprising:

determining a country accepted by a user interface; and

selecting the country as the at least one preferred country.

44. (original) A method according to Claim 42, further comprising:

determining a country based on a network address of a client application from which the search query was submitted; and

selecting the country as the at least one preferred country.

45. (currently amended) A method according to Claim 42, further comprising:  
ordering the search results based on a match of a country of ~~such~~ the search results to the at least one preferred country.

46. (currently amended) A method according to Claim 42, further comprising:  
ordering the search results by degree of match of a country of ~~such~~ the search results to the at least one preferred country.

47. (original) A method according to Claim 46, further comprising:  
demoting the search results in a country other than the at least one preferred country by a predefined shifting factor.

48. (original) A method according to Claim 47, wherein the predefined factor substantially equals two (2.0).

49. (original) A method according to Claim 46, further comprising:  
promoting the search results in a country other than the at least one preferred country by a predefined shifting factor.

50. (original) A method according to Claim 42, further comprising:  
ordering each of the search results by degree of match to the information characteristics.

51. (original) A method according to Claim 42, further comprising:  
detecting a country associated with at least one search result.

52. (original) A method according to Claim 51, further comprising at least one of:  
determining a Uniform Resource Locator (URL) extension for the at least one search  
result;  
examining a domain registrar address for the at least one search result and inferring the  
country from a business associated therewith;  
inferring the country from at least one of the IP address of a Web server from which the  
search result was obtained, a search result document for the at least one search result, or other  
Web pages on a same Web site as the at least one search result; and  
examining anchor text of hyperlinks to the search result document, text near the  
hyperlinks, or countries of the Web pages with hyperlinks to the search result document.

53. (original) A method according to Claim 42, wherein the search results are  
assigned a numerical score, further comprising:  
increasing the numerical score assigned to at least some of the search results in the at  
least one preferred country.

54. (currently amended) A method according to Claim 53, wherein the numerical score is adjusted in accordance with the formula:

$$s_i = \frac{s_i + 1}{2}$$

where  $s_i$  comprises the numerical score for each such search result  $i$ .

55. (original) A method according to Claim 53, wherein the search results are assigned a numerical score, further comprising:

decreasing the numerical score assigned to at least some of the search results in the at least one preferred country.

56. (original) A method according to Claim 42, further comprising:  
presenting the search results.

57. (original) A method according to Claim 56, further comprising:  
performing at least one of controlling enablement of presentation of at least some of the search results for each of the at least one preferred country, grouping together at least some of the search results for each of the at least one preferred country and arranging at least some of the search results for each of the at least one preferred country next to at least some of the search results for at least one country other than the at least one preferred countries prior to presentation to the user.

58. (original) A method according to Claim 42, further comprising:

including one or more related, alternate and less preferred countries in the at least one preferred country.

59. (original) A computer-readable storage medium holding code for performing the method according to Claim 42.

60. (currently amended) An apparatus for providing preferred country ordering of search results, comprising:

means for receiving a search query describing potentially retrievable information provided in a plurality of search result countries;

means for executing a search by evaluating the search query against information characteristics maintained in a searchable data repository;

means for dynamically determining at least one preferred country applicable to search results generated responsive to the executed search; and

means for ordering at least some of the search results ~~in consideration of~~ based on the at least one preferred country.

61. (currently amended) A system for dynamically determining country preferences and ordering of search results, comprising:

a parser receiving a search query request message and parsing at least one of terms and attributes from the search query request message to identify potentially retrievable Web content

provided in a plurality of search result countries;

an indexer executing a search by evaluating the at least one of terms and attributes against information characteristics maintained in a searchable data repository and generating search results responsive to the executed search;

a country promoter determining at least one preferred country, comprising:

a country determiner evaluating characteristics of at least one of the user interface and the Internet Protocol (IP), and selecting the at least one preferred country based on the evaluated characteristics; and

a country orderer ordering at least some of the search results ~~in consideration of~~ based on the at least one preferred country; and

a presenter presenting the search results as search result response messages.

62. (original) A system according to Claim 61, wherein evaluating the user interface further comprises:

a user interface characterizer determining at least one country accepted by the user interface.

63. (original) A system according to Claim 61, wherein evaluating the IP characteristics further comprises:

an Internet Protocol (IP) characterizer determining a network address of a client application from which the search query request message was submitted.

64. (currently amended) A system according to Claim 61, wherein the search results are generated in a ranked order, further comprising:

a search result ~~order~~ orderer ordering at least some of the search results relative to the at least one preferred country by a predefined shifting factor, comprising at least one of demoting each ~~such~~ search result in a country other than the at least one preferred country by the predefined shifting factor and promoting each ~~such~~ search result in the at least one preferred country by at least one position, and promoting each ~~such~~ search result in a country other than the at least one preferred country by the predefined shifting factor and demoting each ~~such~~ search result in the at least one preferred country by at least one position.

65. (original) A system according to Claim 64, further comprising:  
the search result orderer adjusting the predefined shifting factor based on available context in the search query request message and the search results.

66. (currently amended) A system according to Claim 61, wherein the search results are generated in a ranked order by numerical score, further comprising:

[[a]] the search result orderer adjusting the numerical score of at least some of the search results by a predetermined weighting factor comprising at least one of increasing the numerical score assigned to the search results in the at least one preferred country and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country, and decreasing the numerical score assigned to the search results in the at least one preferred country and maintaining the numerical score assigned to the search results in a country

other than the at least one preferred country.

67. (original) A system according to Claim 66, further comprising:

the search result orderer adjusting the predefined weighting factor based on available context in the search query request message and the search results.

68. (original) A system according to Claim 61, wherein the search query request message and each search result response message is HTTP-compliant.

69. (currently amended) A method for dynamically determining country preferences and ordering of search results, comprising:

receiving a search query request message and parsing at least one of terms and attributes from the search query request message to identify potentially retrievable Web content provided in a plurality of search result countries;

executing a search by evaluating the at least one of terms and attributes against information characteristics maintained in a searchable data repository and generating search results responsive to the executed search;

determining at least one preferred country, comprising:

evaluating characteristics of at least one of the user interface and the Internet Protocol (IP); and

selecting the at least one preferred country based on the evaluated characteristics;  
ordering at least some of the search results ~~in consideration of~~ based on the at least one

preferred country; and

presenting the search results as search result response messages.

70. (original) A method according to Claim 69, wherein evaluating the user interface further comprises:

determining at least one country accepted by the user interface.

71. (original) A method according to Claim 69, wherein evaluating the IP characteristics further comprises:

determining a network address of a client application from which the search query request message was submitted.

72. (currently amended) A method according to Claim 69, wherein the search results are generated in a ranked order, further comprising:

ordering at least some of the search results relative to the at least one preferred country by a predefined shifting factor, comprising at least one of:

demoting each ~~such~~ search result in a country other than the at least one preferred country by the predefined shifting factor and promoting each ~~such~~ search result in the at least one preferred country by at least one position; and

promoting each ~~such~~ search result in a country other than the at least one preferred country by the predefined shifting factor and demoting each ~~such~~ search result in the at least one preferred country by at least one position.

73. (original) A method according to Claim 72, further comprising:  
adjusting the predefined shifting factor based on available context in the search query request message and the search results.

74. (original) A method according to Claim 69, wherein the search results are generated in a ranked order by numerical score, further comprising:  
adjusting the numerical score of at least some of the search results by a predetermined weighting factor comprising at least one of:

increasing the numerical score assigned to the search results in the at least one preferred country and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country; and

decreasing the numerical score assigned to the search results in the at least one preferred country and maintaining the numerical score assigned to the search results in a country other than the at least one preferred country.

75. (original) A method according to Claim 74, further comprising:  
adjusting the predefined weighting factor based on available context in the search query request message and the search results.

76. (original) A method according to Claim 69, wherein the search query request message and each search result response message is HTTP-compliant.

77. (original) A computer-readable storage medium holding code for performing the method according to Claim 69.

78. (currently amended) An apparatus for dynamically determining country preferences and ordering of search results, comprising:

means for dynamically determining country preferences and ordering of search results;  
~~comprising:~~

means for receiving a search query request message and parsing at least one of terms and attributes from the search query request message to identify potentially retrievable Web content provided in a plurality of search result countries;

means for executing a search by evaluating the at least one of terms and attributes against information characteristics maintained in a searchable data repository and generating search results responsive to the executed search;

means for determining at least one preferred country, comprising:

means for evaluating characteristics of at least one of the user interface and the Internet Protocol (IP); and

means for selecting the at least one preferred country based on the evaluated characteristics;

means for ordering at least some of the search results ~~in consideration of~~ based on the at least one preferred country; and

means for presenting the search results as search result response messages.

79. (new) A method comprising:

executing a search in response to a search query to generate search results;  
ordering the search results based on a degree of match with the search query;  
dynamically determining a preferred country; and  
reordering at least some of the search results based on the preferred country.

80. (new) The method of claim 79, wherein the preferred country is determined based on an interface characteristic comprising a country accepted by a user interface.

81. (new) The method of claim 79, wherein the preferred country is determined based on an IP characteristic comprising a network address of a client application from which the search query was submitted.

82. (new) The method of claim 79, wherein the preferred country is determined based on a user preference comprising cookies received from a user interface.

83. (new) The method of claim 79, further comprising:  
determining a country associated with each search result based on at least one of a Uniform Resource Locator (URL) associated with each search result, a domain register address associated with each search result, or an anchor text of a hyperlink associated with each search result.

84. (new) The method of claim 83, wherein the at least some search results are reordered based on a degree of match between the countries associated with the search results and the preferred country.

85. (new) The method of claim 84, further comprising at least one of:  
demoting each search result associated with a country other than the preferred country  
and promoting each search result associated with the preferred country; and  
promoting each search result associated with a country other than the preferred country  
and demoting each search result associated with the preferred country.

86. (new) The method of claim 79, further comprising:  
dynamically determining an alternate preferred country based on at least one of interface characteristics, Internet Protocol (IP) characteristics, or user preferences; and  
reordering at least some of the search results based on the alternate preferred country.

87. (new) The method of claim 86, wherein the search results associated with the preferred country are provide before the search results associated with the alternate preferred country.

88. (new) A device comprising:  
a memory to store a plurality of instructions; and

a processor to execute instructions in the memory to:

order search results based on a degree of match with a search query,  
dynamically determine a preferred country based on at least one of an interface  
characteristic, an Internet Protocol (IP) characteristic, or a user preference, and  
reorder at least some of the search results based on the preferred country.

89. (new) A computer-readable medium that stores computer-executable code comprising:
- instructions for executing a search in response to a search query to generate a ranked set search results;
- instructions for dynamically determining a preferred country based on at least one of an interface characteristic, an Internet Protocol (IP) characteristic, or a user preference; and
- instructions for reordering at least one search result of the ranked set of search results based on the preferred country.
